8. (Amended) A dual-mode communication terminal apparatus for wireless communication with a selected base station of one of at least two different communication systems, the communication terminal apparatus being logged on as ready to receive from the selected base station, the communication terminal apparatus comprising:

B2 recognition means for recognizing one of the at least two communication systems, the recognized communication system having the selected base station; and

control means for allocating a network address to the recognized communication system under which the communication terminal apparatus can currently be reached and communicating control information via the selected base station to a control network address stored in a memory of the communication apparatus for influencing an activation/deactivation condition related to another communication system not having the selected base station upon a call being made to the communication terminal apparatus but directed to the communication system not having the selected base station.
